

5 Reasons Your Enterprise Needs a Private Mobile Network

1

IT and IoT mobility

Enable real-time business apps with reliable mobility

2

It's cost effective and quick to deploy

Build in weeks, scale in minutes – Reduce your CAPEX and OPEX by deploying mobile network as a service

3

Unprecedented control of your network

Integrate into the service layer of your enterprise...your firewall, your policies, your rules

4

Lower latency equals higher performance

Near-prem mobile networks provide a real-time multimedia solution by giving you 50ms or better on demand

5

Increased security for the enterprise

SaaS approach simplifies your network while still providing enterprise grade security
