

Unified Communications as a Service (UCaaS) with Real Enterprise Mobility

OVERVIEW

Your enterprise has already adopted UCaaS. What's next and are you getting the mobility you require throughout your enterprise footprint?

Questions to ask:

- 1 Have ALL of your users adopted the UCaaS software? Do they complain about having poor call quality?
- 2 Are you truly mobile? All UCaaS providers provide a mobile app to claim mobility, but can you walk from one end of your facility to the other without dropping or severely degrading the quality of your voice or video call?
- 3 What about the property you own and operate outside of the four walls?
- 4 Are you integrated with other applications and management tools on the network? Your CRM, AD, and IAM tools should already be integrated with your UCaaS platform but what about other IoT devices?
- 5 Are you enabled for 5G IoT? The efficacy of 5G IoT has already shown immediate ROI but connectivity to all things 5G continues to lag behind.

You can now benefit from the deployment of **mobility as a service** because the requirements of low latency and manageable jitter required by multimedia application suites can be adhered to and guaranteed through the use of Alef to deliver an enterprise mobility platform.

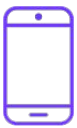

Whether on-site or in the cloud, devices using these applications on-premise enjoy true mobility they require throughout the enterprise footprint. **UCaaS is a cloud-delivered unified communications model that supports six communications functions:**

Enterprise telephony

Meetings (audio/video/web conferencing)

Unified Messaging

Instant Messaging and presence (personal & team)

Mobility

Communications-enabled business processes

WHAT ALEF SOLVES FOR:

- Mobility handoffs from Wi-Fi
- Quick deployment / Scale across your enterprise
- Agnostic - Any Radio
- Quickly onboard devices inside the firewall
- Existing security policies and governance rules can be enforced without alteration
- Allow employees to bring their own device and still manage access inside the enterprise

Alef's Mobile as a Service enables the provisioning, onboarding and connecting of mobile devices over any wireless medium—we are agnostic. This flexibility provides enterprises with the ability to deploy any radio technology required, or use our free radio bundle, and migrate to 5G and other schemes when necessary. Enterprises are now empowered to create, customize, and control their own private mobile network, inside their firewall using programmable APIs for UCaaS.

Offer: \$10K/ per year subscription with free radio and unlimited eSIMs
